Saving Water Video

TASK:

Design and create a short video to teach younger children different ways to save water.

CRITERIA:

- Your presentation must be at least three minutes long.
- It must be filmed around the school showing at least five different ways to save water.
- Every group member must have a turn at filming using a digital camera or iPad® and a turn at demonstrating how to save water.

SUGGESTED MATERIALS:

- digital camera or iPad®
- school grounds
- water sources

Earth and the Environment

Saving Water Video

- Find out about different water sources and how to save water.
- Plan and draw a map of where the water sources are located around the school grounds. Write the water-saving tip you will read at each location.
- Collect and find the materials you will need, including a digital camera or an iPad® and water sources around the school grounds.
- Create your video by following your plan.
- Check that your video meets the criteria.
- Share your water-saving tips by showing your video to the class. Make a class list of all the ideas from each group's video.
